The Great War museum on the Marmolada inaugurated on June 28.

## TOP NEWS

### THE GREAT WAR IN THE HIGHEST MUSEUM IN EUROPE

300 square meters of multimedia settings recreate the everyday life of Italian and Austrian soldiers fighting at the frontline up on summits at 3000 meters high. A spectacular setting on which the Great War Museum rises – the highest in Europe in the heart of the holy monumental area close to the Marmolada glacier and the frontline of the First World War – the exhibit has been recently inaugurated, renovated and enlarged (after its foundation in 1990). The very heart of the exhibition are the recreations of trenches and tunnels but also; the soldiers' huts, the health aspects, the extreme intense life fighting to survive against the forces of nature. The Museum is easily reachable with the cable car from Malga Ciapela to Serauta and is open every day until 13 September (9am-4pm).

## Itineraries

### FROM THE CIANCOAL MEADOWS TO MEIDA

Get to the bridge on Avisio River, which links Pozza with Meida and walk along the sidewalk that skirts the state road toward Pera. After 200 metres, leave it, always following now Avisio's flow. Continue until the wooden bridge of Piciocaa. Once you have crossed it, you will arrive in front of a chapel recently restored and a large playground for children. Make your way to the lower path towards Meida, and cross a broad grassy plain in Ciancoal. When you arrive at the asphalt road bearing the same name, you begin to ascend. Afterwards turn right in the Street del Piz and enter Meida, where you find the Church of San Nicolò. From here, follow Street de Meida, and you will get back to the departure point.

## Did you know that...

If you happen to walk in the wood and on the high pastures of the valley, you will chance upon some trees damaged by lightning. But what happens when a discharge of such energy hits a plant? Sometimes the peak is sheared off, sometimes you can notice a scar following the entire length in a spiral drawing. The lightning's energy opens a wide and deep crack, due to the high pressure contained in the plant's water, which turns rapidly into vapour. Not always the plant dies, but the tissue furnishing the water burn and dry out.
